#### 3.7 CREDIT EXPOSURES SUBJECT TO STANDARDISED APPROACH

The Standardised Approach is applied to portfolios that are classified as permanently exempted from the IRB Approach, and those portfolios that are currently in transition to the IRB Approach.

The Standardised Approach measures credit risk pursuant to fixed risk-weights and is the least sophisticated of the capital calculation methodologies. The risk-weights applied under Standardised Approach are prescribed by BNM and is based on the asset class to which the exposure is assigned. For exposures subject to Standardised Approach, approved External Credit Assessment Institutions ("ECAI") ratings and the prescribed risk-weights based on asset classes are used in the computation of regulatory capital.

The ECAI used by the Group include Fitch Ratings, Moody's Investor Services, S&P, RAM, Malaysia Rating Corporation ("MARC") and Rating & Investment Inc. Assessments provided by approved ECAIs are mapped to credit quality grades prescribed by the regulator.

The table 32 shows the risk-weights applicable for Banking Institutions and Corporates under the Standardised Approach:
